## Fullstack Developer

## Work Experience

### Developer

September 2025 – Present

#### TecBA

- Write and optimize SQL queries to support development teams in diagnosing and resolving data-related issues across the BAX app
- Design and implement Stored Procedures to fulfill specific business and functional requirements
- Create and schedule automated Jobs to execute recurring database tasks without manual intervention
- Perform database sanitization processes to maintain data integrity and performance

### Web Developer

July 2024 – September 2025

#### Visa Solutions

- Built and launched landing pages for multiple company brands using Elementor, ensuring visual consistency and alignment with each brand's identity
- Led SEO improvements across the company's websites, optimizing page structure and content to improve organic visibility

### Freelance Frontend

March 2024

#### Data Racing

- Built a vehicle search engine with dynamic filtering and RESTful API integration for a motorsport client, enabling real-time inventory browsing across 500+ listings

### Developer

May 2023 – February 2024

#### Pawtrics Software

- Designed and developed responsive UI pages and reusable components for the application using React.js, Next.js and Material UI, ensuring a consistent and accessible user interface
- Integrated frontend with a Supabase backend, handling database queries and real-time data management
